

Title:

Vitamin D and the Prevention of Diabetes

Abstract:

Overweight adults age 30 and above, who are at risk for diabetes are needed for a research study on vitamin D and prevention of diabetes.

Message:

Overweight adults age 30 and above, who are at risk for Diabetes are needed for a research study on Vitamin D and prevention of Diabetes.

During the study, participants will obtain information about their health, will receive educational information on the prevention of Diabetes, and will be required to take a Vitamin D supplement daily. Participation in the study will last for up to 4 years. Participants will receive a stipend of up to \$75 for completing each study visit. People diagnosed with Diabetes, Kidney Stones, or with Kidney Disease are not eligible. Other exclusions apply.
