

EC Meeting from 6.18.15

Attendees: Taso, Patty, Saul, Jim, David, Michael Lewis (invited)

1. Michael prepared a nice summary of the change in HbA1c calibration (mandated by the manufacturer), which may lead to lowering of A1c by 0.1 to 0.2%, and the potential impact on D2d (screening and incident diabetes). The committee will continue to review the data (*including new data to be provided by Michael*) and refine the text before sharing with the Steering Committee and disseminating to study staff.

2. Reviewed reports. So far, this month recruitment has been slow. More sites are sending screening samples to the Central Laboratory, which may result in a delay between screening and baseline.

3. November D2d annual meeting. Started brainstorming on topics to discuss. Idea: Bring in expert on behavioral economics or study participation psychology/motivation. Consider sending out survey monkey to sites.
