

Steering Committee (SC) Meeting Minutes

Meeting: November 9, 2017

Meeting called to order- 12:03pm | Adjourned- 12:58pm

Present: Lawrence Phillips (Atlanta), Michael Lewis (Central Lab), Richard Pratley (Florida), Chhavi Chadha (HealthPartners), Erin LeBlanc (Kaiser), Pauline Liao (Lenox Hill), Irwin Brodsky (Maine), Jean Park (MedStar), Cyrus Desouza (Nebraska), Daniel Hsia (Pennington), Lisa Neff (Northwestern), Sun Kim (Stanford), Bess Dawson-Hughes (Tufts), Philip Raskin (UT Southwestern), Patty Sheehan (CC), Anastassios Pittas (CC), Myrlene Staten (NIDDK).

EOS Update

- The study is projected to reach 508 events around May 2018. The CC will inform all sites ~2 months prior to reaching 508 events to start the end of study procedures. The participant's next scheduled visit will serve as the end of study visit.
- All sites will have ~5 months from the end of study announcement to bring back all participants.

Action: The CC is finalizing details regarding the EOS Manual of Procedures and will share on the portal when available.

Future of D2d

- The future of the study will depend on the result. If the result is positive (as we anticipate), a follow-up study could be designed with participants continuing vitamin D long-term (D2dOS).
- Need to establish good scientific aims for D2dOS. The grant to bring back participants who did not qualify due to meeting only 1/3 criteria may become one of the aims of D2dOS. Ancillary studies ideas may also be incorporated in D2dOS.
- Ancillary study ideas:
 - C. Desouza glycated albumin idea is being reviewed by Bill Knowler and Bob Cohen and he plans to submit proposal to PPS. If others are interested please contact Cyrus or Taso.
 - R. Pratley is interested in looking at CGM around an OGTT visit in a cross sectional manner. There was a lot of enthusiasm about this idea and site PI will email Rich to express interest.

Action: R. Pratley will develop a budget based on the Florida site and submit to Taso for discussion with Myrlene and Saul.

Manuscripts Update

- Dr. LeBlanc's et al. manuscript *Baseline characteristics of the Vitamin D and Type 2 Diabetes trial (D2d)* is in the final stages of development and will be ready for submission within the next few weeks.
- Dr. Desouza's et al. manuscript on *The Influence of the Hemoglobin Glycation Index on Glycemic Classification in the D2d Study* is currently being revised.

Steering Committee (SC) *Meeting Minutes*

Reviewed PR17-02 Pittas Proposal

- The committee reviewed Dr. Pittas tier 1 proposal on: *Natural history of pre diabetes*. The proposal will study the natural history of pre-diabetes based on the current ADA criteria compared with the prior ADA criteria and with WHO and ICE criteria.
- The cohort would bring back individuals who failed at the Baseline visit and aren't followed in D2d. Categories by single criteria (A1c; FPG; 2hPG) would be of interest.

Action: The Steering Committee voted and approved the proposal.

Reports Reviewed.
